

Supplementary Figures S6-10

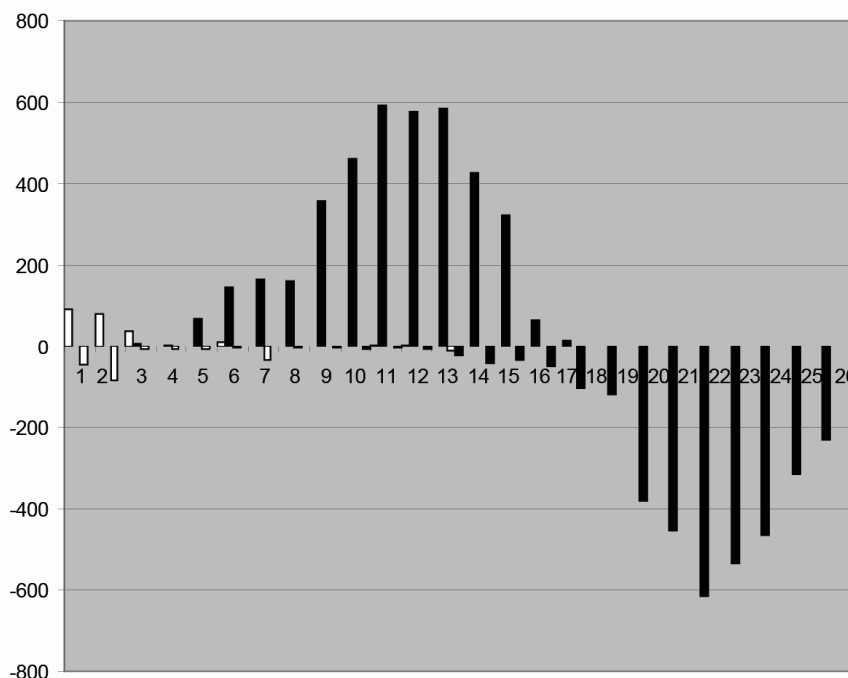

Figures S6. Uncorrected pairwise distances for the Megophryidae. Above the distances for the 16S gene, below the distances for the COI gene; white bars: intraspecific distances, black bars: interspecific distances.

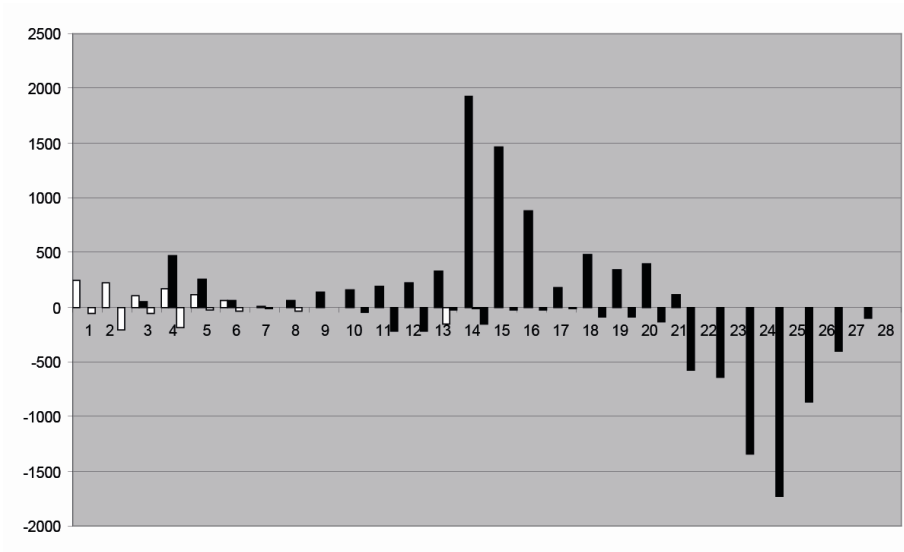

Figures S7. Uncorrected pairwise distances for the Microhylidae. Above the distances for the 16S gene, below the distances for the COI gene; white bars: intraspecific distances, black bars: interspecific distances.

Figures S8. Uncorrected pairwise distances for the Dicroglossidae. Above the distances for the 16S gene, below the distances for the COI gene; white bars: intraspecific distances, black bars: interspecific distances.

Figures S9. Uncorrected pairwise distances for the Ranidae. Above the distances for the 16S gene, below the distances for the COI gene; white bars: intraspecific distances, black bars: interspecific distances.

Figures S10. Uncorrected pairwise distances for the Rhacophoridae. Above the distances for the 16S gene, below the distances for the COI gene; white bars: intraspecific distances, black bars: interspecific distances.
