## Synthesis of 2-5

## $\left[\mathrm{UO}_{2} \mathrm{Br}_{4}\right]\left(\mathrm{C}_{12} \mathbf{H}_{\mathbf{1 4}} \mathrm{N}_{\mathbf{2}}\right)(\mathbf{2})$

Compound 2 was prepared by dissolving 0.128 g of $\mathrm{UO}_{2}\left(\mathrm{CH}_{3} \mathrm{COO}\right)_{2} \cdot 2 \mathrm{H}_{2} \mathrm{O}$ in water (4.0 $\mathrm{mL})$ and $\mathrm{HBr}\left(0.40 \mathrm{~mL}, 48 \%\right.$ in $\left.\mathrm{H}_{2} \mathrm{O}\right)$ in a 25 mL Erlenmeyer flask. To this yellow solution, 1,2-bis(4-pyridyl)ethane ( 0.051 g ) was added. The resulting mixture was evaporated using gentle heat to an approximate volume of 2 mL and allowed to cool. The flask was then covered with a piece of Parafilm into which several holes were punched. After 45 days X-ray quality crystals were obtained.

## $\left[\mathrm{UO}_{2} \mathrm{Br}_{4}\right]\left(\mathrm{C}_{\mathbf{1 2}} \mathrm{H}_{\mathbf{1 2}} \mathbf{N}_{\mathbf{2}}\right)(\mathbf{3})$

Compound 3 was prepared by dissolving 0.256 g of $\mathrm{UO}_{2}\left(\mathrm{CH}_{3} \mathrm{COO}\right)_{2} \cdot 2 \mathrm{H}_{2} \mathrm{O}$ in water ( 2.5 $\mathrm{mL})$ and $\mathrm{HBr}\left(0.75 \mathrm{~mL}, 48 \%\right.$ in $\left.\mathrm{H}_{2} \mathrm{O}\right)$ in a 25 mL Erlenmeyer flask. To this yellow solution, trans-1,2-bis(4-pyridyl)ethylene $(0.250 \mathrm{~g})$ in water $(2.5 \mathrm{~mL})$ and $\mathrm{HBr}(0.75 \mathrm{~mL}$, $48 \%$ in $\mathrm{H}_{2} \mathrm{O}$ ) was added. The resulting mixture was evaporated using gentle heat to an approximate volume of 4 mL and allowed to cool. The flask was then covered with a piece of Parafilm into which several holes were punched. After 2.5 months, yellow, Xray quality crystals were obtained as a mixture with white solids. These were easily physically separated under magnification.
$\left[\mathrm{UO}_{2} \mathrm{Br}_{4}\right]\left(\mathrm{C}_{10} \mathrm{H}_{11} \mathrm{~N}_{3}\right)_{2} \cdot \mathbf{2 B r} \cdot \mathbf{2 \mathrm { H } _ { 2 } \mathrm { O }}$ (4)
Compound 4 was prepared by dissolving 0.258 g of $\mathrm{UO}_{2}\left(\mathrm{CH}_{3} \mathrm{COO}\right)_{2} \cdot 2 \mathrm{H}_{2} \mathrm{O}$ in water $(2.5$ $\mathrm{mL})$ and $\mathrm{HBr}\left(0.75 \mathrm{~mL}, 48 \%\right.$ in $\left.\mathrm{H}_{2} \mathrm{O}\right)$ in a 25 mL Erlenmeyer flask. To this yellow solution, $4,4^{\prime}$-dipyridylamine ( 0.239 g ) in water ( 2.5 mL ) and $\mathrm{HBr}(0.75 \mathrm{~mL}, 48 \%$ in $\mathrm{H}_{2} \mathrm{O}$ ) was added. The resulting mixture was evaporated using gentle heat to an approximate volume of 4 mL and allowed to cool. The flask was then covered with a piece of Parafilm into which several holes were punched. After 2.5 months, large X-ray quality crystals were obtained.

## $\left[\mathrm{UO}_{2} \mathrm{Br}_{4}\right]\left(\mathrm{C}_{13} \mathrm{H}_{16} \mathrm{~N}_{2}\right)_{2} \cdot \mathbf{2 B r}(5)$

Compound 5 was prepared by dissolving 0.261 g of $\mathrm{UO}_{2}\left(\mathrm{CH}_{3} \mathrm{COO}\right)_{2} \cdot 2 \mathrm{H}_{2} \mathrm{O}$ in water $(2.5$ $\mathrm{mL})$ and $\mathrm{HBr}\left(0.75 \mathrm{~mL}, 48 \%\right.$ in $\left.\mathrm{H}_{2} \mathrm{O}\right)$ in a 25 mL Erlenmeyer flask. To this yellow solution, 4,4 '-trimethylene dipyridine ( 0.236 g ) in water ( 2.5 mL ) and $\mathrm{HBr}(0.75 \mathrm{~mL}$, $48 \%$ in $\mathrm{H}_{2} \mathrm{O}$ ) was added. The resulting mixture was evaporated using gentle heat to an approximate volume of 4 mL and allowed to cool. The flask was then covered with a piece of Parafilm into which several holes were punched. After 2.5 months, yelloworange, X-ray quality crystals were obtained.

Table S1a. Hydrogen bonds for 1a [A and deg.].

| D-H...A |  |  |  |  |
| :--- | ---: | ---: | ---: | :--- |
|  |  | $d(D-H)$ | $d(H . . . A)$ | $d(D \ldots A)$ |$<(D H A)$

Symmetry transformations used to generate equivalent atoms:
\#1-x,-y,-z \#2 -x+2,-y+1,-z+1 \#3 x,y+1,z

Table S2. Hydrogen bonds for 2 [A and deg.].

| D-H...A | $d(D-H)$ | $d(H \ldots A)$ | $d(D . . . A)$ | $<(D H A)$ |
| :--- | ---: | :---: | :---: | :---: |
