

Lead abundances in bony fish from the world oceans: significance for contaminated marine habitats and environmental policies

Alain Véron^{a,b}, Isabelle Bernier^c and Bruno Hamelin^a

^a CEREGE, Aix-Marseille Univ., CNRS, IRD, Coll. De France, Europôle Méditerranéen de l'Arbois, BP80, 13545 Aix en Provence cedex 4, France.

^b GEOTOP, Université du Québec à Montréal, CP8888 Centre-Ville, Montréal, QC H3C3P8, Canada.

^c Rectorat Aix-Marseille, DRAES, Place Lucien Paye, 13621 Aix en Provence cedex 1, France.

Sup. Table S1: Lead concentrations in muscles and livers from the main oceanic basins with corresponding references and FAO sampling areas (detailed captions are provided in the excel file).

Le	mean fish length (cm) range is provided when mean is not available "mixed" is used for juvenile-adult composites or several species "juv" is used for juveniles (when size not available)
sd	standard deviation
M	Pb concentration in muscle (ppm wet weight)
L	Pb concentration in muscle (ppm wet weight)
0.000	wet concentration converted from dry concentration
sd	standard deviation
n	number of analyzed fish tissues
DATE	date of sampling
Fa	FAO area
Fsa	FAO subarea
Fd	FAO division
GFCMsa	GFCM subarea
LOC	nearest regional sea and/or country
na	not available

Table with columns: ID, Name, Date, etc. containing extensive data for various individuals and entities.
