

COMPTES RENDUS GEOSCIENCE

Volume 351 (2019) – No. 2–3 – February–March

Cover illustration: HPMPS-9

Thematic issue

**High-Pressure Mineral Physics Seminar (HPMPS-9, Saint-Malo, France,
24–28 September 2017)**

Guest Editors: James Badro, Guillaume Fiquet, Robert Liebermann, Eiji Ohtani, Yanbin Wang

- Foreword
Guillaume Fiquet and James Badro 59
- Preface. Some remarks on the evolution of mineral physics over the past 40 years
Jean-Paul Poirier 67
- High-pressure yield strength of rocksalt structures using quartz Raman piezometry
Bruno Reynard, Razvan Caracas, Hervé Cardon, Gilles Montagnac and Sébastien Merkel 71
- Olivine intergranular plasticity at mantle pressures and temperatures
Paul Raterron, Caroline Bollinger and Sébastien Merkel 80
- Bulk modulus of Fe-rich olivines corrected for non-hydrostaticity
Frédéric Bézina, Misha Bystricky, Nicolas Tercé, Matthew L. Whitaker and Haiyan Chen 86
- Density variations of Cr-rich garnets in the upper mantle inferred from the elasticity of uvarovite garnet
Steeve Gréaux and Akihiro Yamada 95
- High-pressure and high-temperature stability of chlorite and 23-Å phase in the natural chlorite and synthetic MASH system
Nao Cai and Toru Inoue 104
- Synthesis and characterization of polycrystalline $KAlSi_3O_8$ hollandite [liebermannite]: Sound velocities vs. pressure to 13 GPa at room temperature
Ting Chen, Gabriel D. Gwanmesia, Lars Ehm, Charles Le Losq, Daniel R. Neuville, Brian L. Phillips, Baosheng Li and Robert C. Liebermann 113
- Pressure-induced dehydration of diopside: A single-crystal X-ray diffraction and Raman spectroscopy study
Fei Qin, Xiang Wu, Shan Qin, Dongzhou Zhang, Vatali B. Prakapenka and Steven D. Jacobsen 121
- High-pressure single-crystal X-ray diffraction and synchrotron Mössbauer study of monoclinic ferrosilite
Natalia V. Solomatova, Ayya Alieva, Gregory J. Finkelstein, Wolfgang Sturhahn, Michael B. Baker, Christine M. Beavers, Jiyong Zhao, Thomas S. Toellner and Jennifer M. Jackson 129

• Effects of Fe and Al incorporations on the bridgmanite–postperovskite coexistence domain Xianlong Wang, Taku Tsuchiya and Zhi Zeng	141
• Electrical resistivity of <i>fcc</i> phase iron hydrides at high pressures and temperatures Kenji Ohta, Sho Suehiro, Kei Hirose and Yasuo Ohishi	147
• Resistivity saturation in liquid iron–light-element alloys at conditions of planetary cores from first principles computations Fabian Wagle, Gerd Steinle-Neumann and Nico de Koker	154
• Sound velocity and density of liquid Ni ₆₈ S ₃₂ under pressure using ultrasonic and X-ray absorption with tomography methods Hidenori Terasaki, Keisuke Nishida, Satoru Urakawa, Yusaku Takubo, Soma Kuwabara, Yuta Shimoyama, Kentaro Uesugi, Yoshio Kono, Akihisa Takeuchi, Yoshio Suzuki, Yuji Higo and Tadashi Kondo	163
• Penetration of molten iron alloy into the lower mantle phase Takashi Yoshino	171
• Development of density measurement for metals at high pressures and high temperatures using X-ray absorption imaging combined with externally heated diamond anvil cell Yusaku Takubo, Hidenori Terasaki, Tadashi Kondo, Shingo Mitai, Seiji Kamada, Takumi Kikegawa and Akihiko Machida	182
• Sound velocity of Fe ₃ C at high pressure and high temperature determined by inelastic X-ray scattering Suguru Takahashi, Eiji Ohtani, Tatsuya Sakamaki, Seiji Kamada, Hiroshi Fukui, Satoshi Tsutsui, Hiroshi Uchiyama, Daisuke Ishikawa, Naohisa Hirao, Yasuo Ohishi and Alfred Q.R. Baron	190
• On the implications of the coupled evolution of the deep planetary interior and the presence of surface ocean water in hydrous mantle convection Takashi Nakagawa and Hikaru Iwamori	197
• Trace-element characteristics of east–west mantle geochemical hemispheres Hikaru Iwamori, Hitomi Nakamura, Masaki Yoshida, Takashi Nakagawa, Kenta Ueki, Atsushi Nakao, Tatsuji Nishizawa and Satoru Haraguchi	209
• Thermodynamical constraints on the crystallization of a deep magma–ocean on Earth Denis Andrault	221
• Composition and pressure dependence of lattice thermal conductivity of (Mg,Fe)O solid solutions Akira Hasegawa, Kenji Ohta, Takashi Yagi, Kei Hirose, Yoshiyuki Okuda and Tadashi Kondo	229
• Elastic constants of single-crystal Pt measured up to 20 GPa based on inelastic X-ray scattering: Implication for the establishment of an equation of state Seiji Kamada, Hiroshi Fukui, Akira Yoneda, Hitoshi Gomi, Fumiya Maeda, Satoshi Tsutsui, Hiroshi Uchiyama, Naohisa Hirao, Daisuke Ishikawa and Alfred Q.R. Baron	236
• Structural phase transitions in aluminium above 320 GPa Guillaume Fiquet, Chandrabhas Narayana, Christophe Bellin, Abhay Shukla, Imène Estève, Art L. Ruoff, Gaston Garbarino and Mohamed Mezouar	243
• High-pressure generation in the Kawai-type multianvil apparatus equipped with tungsten-carbide anvils and sintered-diamond anvils, and X-ray observation on CaSnO ₃ and (Mg,Fe)SiO ₃ Daisuke Yamazaki, Eiji Ito, Takashi Yoshino, Noriyoshi Tsujino, Akira Yoneda, Hitoshi Gomi, Jaseem Vazhakuttiyakam, Moe Sakurai, Youyue Zhang, Yuji Higo and Yoshinori Tange	253
• High pressure generation in Kawai-type multianvil apparatus using nano-polycrystalline diamond anvils Tetsuo Irifune, Takehiro Kunimoto, Toru Shinmei and Yoshinori Tange	260
• An upgraded and integrated large-volume high-pressure facility at the GeoSoilEnviroCARS bending magnet beamline of the Advanced Photon Source Tony Yu, Yanbin Wang, Mark L. Rivers and Stephen R. Sutton	269
• A waveguide-based flexible CO ₂ -laser heating system for diamond-anvil cell applications Alexander Kurnosov, Hauke Marquardt, Leonid Dubrovinsky and Vasily Potapkin	280
• Simultaneous measurements of the two-dimensional distribution of infrared laser intensity and temperature in a single-sided laser-heated diamond anvil cell Kamil M. Bulatov, Pavel V. Zinin, Yulia V. Mantrova, Aleksey A. Bykov, Maksim I. Gaponov, Aleksandr S. Machikhin, Ivan A. Troyan and Igor B. Kuzuza	286
• Combining ECCI and FIB milling techniques to prepare site-specific TEM samples for crystal defect analysis of deformed minerals at high pressure Nobuyoshi Miyajima, Tommaso Mandolini, Florian Heidelbach and Caroline Bollinger	295
