Available online 28 September 2012

There is a scale problem between the text and Figure 5. Figure 5 is correct.
Hence in the text (Abstract and sections 4.1 Seismic profiles, and 5. Discussion):

- the total shortening is 275 m and not 690 m;
- the Plio-Pleistocene shortening rate is 0.55 mm/yr instead of 0.14 mm/yr;
- with the assumption shortening occurred only during Pleistocene, the shortening rate is 0.15 mm/yr instead of 0.38 mm/yr (that is, 3% and not 8% of the current shortening in Tunisia).

The other conclusions remain unchanged.
