

COMPTES RENDUS MECANIQUE

Tome 335 (2007) – N° 5–6

Creation of a dendritic front during the solidification of an Al–Cu alloy; insert: melting titanium.

Formation d'un front dendritique lors de la solidification d'un alliage Al–Cu ; en bas à droite : fusion de titane.

Thematic issue / Numéro thématique

Melting and solidification: processes and models

Guest editors / Rédacteurs en chef invités :

Mohammed El Ganaoui, Roger Prud'homme, Rachid Bennacer

- Foreword
René Moreau, Mohammed El Ganaoui, Roger Prud'homme 247
- List of referees who have worked on the article of this issue 251
- Flows in solidification**
- Secondary and oscillatory gravitational instabilities in canonical three-dimensional models of crystal growth from the melt. Part 1: Rayleigh–Bénard systems
Marcello Lappa 253
- Secondary and oscillatory gravitational instabilities in canonical three-dimensional models of crystal growth from the melt. Part 2: lateral heating and the Hadley circulation
Marcello Lappa 261
- 3D macrosegregation simulation with anisotropic remeshing
Sylvain Gouttebroze, Michel Bellet, Hervé Combeau 269
- A thermo-hydraulic numerical model to study spot laser welding
Marc Medale, Charline Xhaard, Rémy Fabbro 280
- Three-dimensional finite element model for metal displacement and heat transfer in squeeze casting processes
Roland W. Lewis, Z.Q. Han, David T. Gethin 287

Suite du sommaire page suivante

Sommaire (suite)

• Lattice Boltzmann method for melting/solidification problems El Alami Semma, Mohammed El Ganaoui, Rachid Bennacer	295
• Thermal vibrational convection in a two-phase stratified liquid Qingming Chang, J. Iwan D. Alexander	304
Processes and control of growth	
• Theoretical confirmation of the crystallization of a compound alloy using the AHP crystal growth method Marina Marchenko	315
• Controlling the growth interface shape in the growth of CdTe single crystals by the traveling heater method Sadik Dost, YongCai Liu	323
• Control of melt convection by a travelling magnetic field during the directional solidification of Al–Ni alloys Kader Zaidat, Nathalie Mangelinck-Noël, René Moreau	330
Experiments for solidification benchmarks	
• A quasi two-dimensional benchmark experiment for the solidification of a tin–lead binary alloy Xiao Dong Wang, Patrick Petitpas, Christian Garnier, Jean-Pierre Paulin, Yves Fautrelle	336
• Geometry of the melting interface in cylindrical metal rods under microgravity conditions Nicolas R. Ward, Ted A. Steinberg	342
• Modeling fragmentation of plasma-sprayed particles impacting on a solid surface at room temperature André McDonald, Michelle Xue, Sanjeev Chandra, Javad Mostaghimi, Christian Moreau	351
