

COMPTES RENDUS MECANIQUE

Tome 338 (2010) – N° 10–11

Modelling a soil sample using concentric crowns (See F. Bourrier et al., this issue)

Thematic issue / Numéro thématique

Micromechanics of granular materials

Guest editors / Rédacteurs en chef invités : Félix Darve, François Nicot

- Foreword
Félix Darve, François Nicot 555
- Evolution of functional connectivity in contact and force chain networks: Feature vectors, k -cores and minimal cycles
Antoinette Tordesillas, Patrick O'Sullivan, David M. Walker, Paramitha 556
- Constitutive relations for the isotropic deformation of frictionless packings of polydisperse spheres
Fatih Göncü, Orencio Durán, Stefan Luding 570
- Effect of the grain elongation on the behaviour of granular materials in biaxial compression
Cécile Nouguier-Lehon 587
- Micromechanical study of plasticity of granular materials
Niels P. Kruyt 596
- Discrete numerical investigation of the ratcheting phenomenon in granular materials
Francesco Calvetti, Claudio di Prisco 604
- Modelling of volume change in granular materials in relation to their internal state
Eric Vincens, Yuhanis Yunus, Bernard Cambou 615

Suite du sommaire page suivante

Sommaire (suite)

- Multiscale approaches to describe mechanical responses induced by particle removal in granular materials
Luc Scholtès, Pierre-Yves Hicher, Luc Sibille 627
- Evolution of the micromechanical properties of impacted granular materials
Franck Bourrier, François Nicot, Felix Darve 639
