

# COMPTES RENDUS PHYSIQUE

Tome 7 (2006) – N° 3–4

Left: view of the great red spot of Jupiter from the Voyager 1 spacecraft, launched in 1977 (Credit JPL-NASA).  
Right: simulations of a molecular cloud in the interstellar medium, as a fractal of dimension 2 (Pfenniger & Combes 1994).

*Gauche : Image de la grande tache rouge de Jupiter, prise de Voyager 1, satellite lancé en 1977 (Credit JPL-NASA). Droit : simulations d'un nuage moléculaire dans le milieu interstellaire, comme un fractal de dimension 2 (Pfenniger & Combes 1994).*

## DOSSIER

Statistical mechanics of non-extensive systems / *Mécanique statistique des systèmes non-extensifs*

Guest editors / *Rédacteurs en chef invités* : **Françoise Combes, Raoul Robert**

- Foreword  
**Françoise Combes, Raoul Robert** ..... 307
- Participants ..... 310

## Statistical mechanics of collisionless stellar systems

- Reconciliation of statistical mechanics and astro-physical statistics: The errors of conventional canonical thermostatics  
**Dieter H.E. Gross** ..... 311
- Nonlinear mean-field Fokker–Planck equations and their applications in physics, astrophysics and biology  
**Pierre-Henri Chavanis** ..... 318
- Newtonian gravity in  $d$  dimensions  
**Pierre-Henri Chavanis** ..... 331
- Mean field theory and general relativistic black holes  
**C. Chevalier, F. Debbasch** ..... 343

*Suite du sommaire page suivante*

## Clustering, self-gravity and fractal structure

- Challenges in nonlinear gravitational clustering  
**Thanu Padmanabhan** ..... 350
- Virial statistical description of non-extensive hierarchical systems  
**Daniel Pfenniger** ..... 360
- Lattice melting in perpetually pulsating equilibria  
**Christophe Pichon, Donald Lynden-Bell** ..... 373
- Development of fractal geometry in a one-dimensional gravitational system  
**Bruce N. Miller, Jean-Louis Rouet** ..... 383
- Statistical mechanics of the self-gravitating gas: Thermodynamic limit, instabilities and phase diagrams  
**Hector J. de Vega, Norma G. Sanchez** ..... 391
- Self-gravitating phase transitions: Point particles, black holes and strings  
**Norma G. Sanchez** ..... 398
- Gravity, dimension, equilibrium, and thermodynamics  
**Jérôme Perez** ..... 406

## Turbulence, chaos and generalized thermodynamics

- Statistical mechanics and long range interactions  
**Julien Barré, Freddy Bouchet** ..... 414
- Statistical mechanics of the shallow-water system with an a priori potential vorticity distribution  
**Pierre-Henri Chavanis, Bérengère Dubrulle** ..... 422
- The turbulent interstellar medium  
**Andreas Burkert** ..... 433
- Stochastic invertible mappings for Tsallis distributions  
**Christophe Vignat, A. Plastino** ..... 442
- Turbulent cascade of circulations  
**Gregory L. Eyink** ..... 449
