

## Keyword index Vol. 10, 2009

<sup>137</sup>Cs – Hubert Ph., 622

**3-tert-butylcyclohexene** – Gaál-Nagy K., 491

### A

**Ab initio calculations** – Adessi C., 305

**Ab-initio electronic structure** – Rohlfing M., 528

**Absorption line shape** – Bordé C.J., 866 – Djerroud K., 883

**Absorption spectra** – Gaál-Nagy K., 491

**Acceleration** – Malka V., 106 – Pukhov A., 159 – Silva L.O., 167

**Acetylene** – Yamada K.M.T., 907

**Acoustic microscopy** – Tahraoui T., 227

**Acoustic signal** – Tahraoui T., 227

**Acoustics** – Pitre L., 835

**Adaptive holography** – Bortolozzo U., 938

**Aged wood** – Yokoyama M., 601

**All-optical signal processing** – Talneau A., 949

**Ancient** – Cotte M., 590

**Antenna radiation pattern** – Rioult J., 13

**Archeointensity** – Gallet Y., 630

**Archeology** – Gallet Y., 630

**Archeomagnetism** – Gallet Y., 630

**ARPES** – Tomczak J.M., 537

**Attenuation** – Tahraoui T., 227

**Authentication of old wines** – Hubert Ph., 622

### B

**Ballistic transport** – Ishii H., 283

**Base units of the SI** – Bordé C.J., 866

**Beam steering** – Ourir A., 414

**Betatron radiation** – Muggli P., 116

**Bethe–Salpeter equation** – Puschnig P., 504

**Biofluids** – Misbah C., 701

**Biomaterials** – Hidouri M., 242

**Biomolecules** – Castro A., 469

**Birefringence** – Santagiustina M., 980

**Blood rheology** – Vlahovska P.M., 775

**Boltzmann constant** – Pitre L., 835 – Benz S., 849 – Bordé C.J., 866 – Yamada K.M.T., 907

**Brushstrokes** – de Viguierie L., 612

**BSE** – Rehr J.J., 548

**Bubble regime** – Veisz L., 140

### C

**Cable-bundle** – Andrieu G., 83

**Capsule** – Barthès-Biesel D., 764

**Carbon materials** – Foa Torres L.E.F., 297

**Carbon nanotubes** – Ferrier M., 252 – Nanot S., 268 – Adessi C., 305 – Pribat D., 320 – Derycke V., 330

**Cell mechanics** – Verdier C., 790

**Charge transport** – Ishii H., 283

**Charged particle acceleration** – Bulanov S.V., 216

**Chemical analysis** – Walter P., 676

**Circuits** – Adessi C., 305

**Circular polarization** – Macchi A., 207

**Cloaking** – Wood B., 379 – McPhedran R.C., 391

**CNTFET** – Derycke V., 330

**Coherent population oscillation** –

Baldit E., 927 – Martinez A., 1000

**Colliding pulses** – Faure J., 148

**Complex fluids** – Misbah C., 701

**Constitutive equations** – Fischer P., 740

**Controlled growth and organisation** – Pribat D., 320

**Coupled resonators** – Trebaol S., 964

**Cultural heritage** – Cotte M., 590 – Lafait J., 649 – Mahnke H.-E., 660 – Walter P., 676

### D

**Dating method** – Gallet Y., 630

**Definition of the kelvin** – Fellmuth B., 828

**Deformability** – Guido S., 751

**Delay lines** – Talneau A., 949

**Density** – Yokoyama M., 601

**Density virial** – Mehl J.B., 859

**Determination of fundamental constants** – Castrillo A., 894

**Device applications** – Pribat D., 320

**Dielectric constant gas thermometry** – Fellmuth B., 828

**Digital transmission** – Zeddama A., 4

**Doppler width** – Bordé C.J., 866 – Yamada K.M.T., 907

**Driven transport** – Foa Torres L.E.F., 297

**Drying** – de Viguierie L., 612

### E

**E.M. cavity** – Leman S., 70

**EELS** – Hogan C., 560  
**EIT** – Goldfarb F., 919  
**Elastic modulus** – Chakroun M., 236  
**Elastic stress** – Steinberg V., 728  
**Elastic turbulence** – Steinberg V., 728  
**Electric field measurement** – Rioult J., 13  
**Electro-optic sampling** – Lippens D., 400  
**Electromagnetic cavity** – Orjubin G., 42  
**Electromagnetic compatibility** – Zeddarn A., 4 – Rioult J., 13  
**Electromagnetic emission** – Andrieu G., 83  
**Electromagnetic radiation** – Beghou L., 91  
**Electromagnetic theory** – McPhedran R.C., 391  
**Electromagnetically induced transparency** – Nielsen T.R., 957  
**Electromagnetism** – Pitre L., 835  
**Electron acceleration** – Faure J., 148  
**Electron and positron acceleration** – Muggli P., 116  
**Electron and positron focusing** – Muggli P., 116  
**Electronic conductivity** – Nanot S., 268  
**Electronic equipment testing** – Rioult J., 13  
**Electronic structure calculations** – Wehnic W., 514  
**Electronic transport** – Adessi C., 305  
**EMC** – Bonnet P., 54  
**Emulsions** – Fischer P., 740  
**EXAFS** – Rehr J.J., 548  
**Excitations** – Castro A., 469  
**Excited state** – Rohlfing M., 528  
**Exciton** – Puschnig P., 504

## F

**Fabry–Perot cavity antennas** – Ourir A., 414  
**Fano profiles** – Goldfarb F., 919  
**Fast light** – Goldfarb F., 919  
**FDTD** – Adam J.-P., 65  
**Field statistics** – Serra R., 31  
**Foams** – Fischer P., 740  
**Frequency comb** – Yamada K.M.T., 907  
**Frequency reconfigurable** – Ourir A., 414

**FT-IR** – Cotte M., 590  
**FTIR** – Cotte M., 590  
**Functionalization** – Derycke V., 330  
**Fundamental constant** – Fellmeth B., 828 – Djerroud K., 883

## G

**G. Kron’s formalism** – Leman S., 70  
**Gain** – Degoli E., 575  
**Gamma spectrometry** – Hubert Ph., 622  
**Geomagnetism** – Gallet Y., 630  
**Geometric transforms** – Guenneau S., 352  
**Graphene** – Foa Torres L.E.F., 297

## H

**Helium** – Mehl J.B., 859  
**High directivity** – Ourir A., 414  
**High magnetic field** – Nanot S., 268  
**High-current beams** – Fuchs J., 176  
**High-power laser** – Fuchs J., 176  
**Hinoki (*Chamaecyparis obtusa*)** – Yokoyama M., 601  
**Horyu-ji temple** – Yokoyama M., 601  
**HREELS** – Hogan C., 560  
**Hydrodynamic interaction** – Barthès-Biesel D., 764  
**Hyperelastic membrane** – Barthès-Biesel D., 764  
**Hyperfrequency** – Acher O., 423

## I

**Imaging techniques** – Walter P., 676  
**Infra-red** – Lippens D., 400 – Cotte M., 590  
**Instability** – Lindner A., 712  
**Interference** – Rouissi F., 22 – Lafait J., 649  
**Intra-vehicle communication** – Rouissi F., 22  
**Intrinsic superconductivity** – Ferrier M., 252  
**Inverse Compton source** – Mahnke H.-E., 660 – Walter P., 676  
**Invisibility** – Wood B., 379  
**Ion acceleration** – Lefebvre E., 197 – Macchi A., 207  
**Ion beam** – Fuchs J., 176  
**Isochoric heating** – Lefebvre E., 197

## J

**Johnson noise** – Benz S., 849  
**Josephson arrays** – Benz S., 849  
**Josephson effect** – Ferrier M., 252

## K

**Kubo–Greenwood conductance** – Ishii H., 283

## L

**Large EMC problems** – Leman S., 70  
**Laser** – Malka V., 106 – Pukhov A., 159 – Silva L.O., 167  
**Laser spectroscopy** – Bordé C.J., 866 – Djerroud K., 883 – Castrillo A., 894  
**Laser–particle acceleration** – Carroll D.C., 188  
**Laser–plasma acceleration** – Macchi A., 207  
**Laser–plasma interaction** – Faure J., 148 – Carroll D.C., 188  
**Laser-driven electron acceleration** – Leemans W.P., 130 – Weisz L., 140  
**Lenses** – Guenneau S., 352  
**Levelling** – de Viguierie L., 612  
**Light-valves** – Bortolozzo U., 938  
**Lipid membrane** – Vlahovska P.M., 775  
**Liquid crystals** – Bortolozzo U., 938  
**Local field effects** – Hogan C., 560  
**Localization** – Ishii H., 283  
**Low-emittance beam** – Fuchs J., 176  
**Luster ceramic** – Lafait J., 649

## M

**Magnetic metamaterials** – Acher O., 423  
**Mechanical properties** – Hidouri M., 242 – Yokoyama M., 601  
**Metamaterials** – Wood B., 379 – Lippens D., 400 – Ourir A., 414 – Fink M., 447  
**Metastable helium** – Goldfarb F., 919  
**Method of moments** – Andrieu G., 83  
**Metrology** – Pitre L., 835  
**Microcapillary** – Guido S., 751

**Microfluidics** – Guido S., 751  
**Microstructure** – Fischer P., 740  
**Microwave photonics** – Berger P., 991  
**Modal finite element method** – Orjubin G., 42  
**Momentum-resolved spectroscopy** – Tomczak J.M., 537  
**Monoenergetic** – Veisz L., 140  
**Monolayer structures** – Tahraoui T., 227  
**Multilayer structures** – Tahraoui T., 227

## N

**Nanocrystals** – Degoli E., 575  
**Nanotubes** – Foa Torres L.E.F., 297  
**Negative refraction** – Guenneau S., 352 – Adams S.D.M., 437  
**Negative refractive index materials** – Lippens D., 400  
**NEMS** – Derycke V., 330  
**NIR** – Yamada K.M.T., 907  
**Noise** – Rouissi F., 22 – Berger P., 991  
**Noise thermometry** – Benz S., 849  
**Non-destructive analytics** – Mahnke H.-E., 660  
**Non-Destructive Control** – Tahraoui T., 227  
**Non-linear model** – Chakroun M., 236  
**Nonlinear effects** – Martinez A., 1000  
**Nonlinear optics** – Thévenaz L., 1008  
**Nonlinear wave-mixing** – Bortolozzo U., 938  
**Numerical modeling** – Andrieu G., 83

## O

**Oil painting** – de Viguierie L., 612  
**Optical delay lines** – Trebaol S., 964  
**Optical fibers** – Thévenaz L., 1008  
**Optical parametric oscillators and amplifiers** – Santagiustina M., 980  
**Optical propagation in dispersive media** – Thévenaz L., 1008  
**Optical properties** – McPhedran R.C., 391 – Degoli E., 575  
**Optical spectrum** – Rohlffing M., 528  
**Organic semiconductor** – Puschnig P., 504

**Other fiber-optical devices** – Santagiustina M., 980

## P

**Painting** – Cotte M., 590  
**Pattern formation** – Lindner A., 712  
**Periodically loaded transmission line** – Lippens D., 400  
**Phase change materials** – Wełnic W., 514  
**Phase coherent transport** – Ferrier M., 252  
**Phenomenological models** – Fischer P., 740  
**Photonic crystals** – Lippens D., 400 – Talneau A., 949 – Nielsen T.R., 957  
**Photonic integrated circuits** – Talneau A., 949  
**Physical color** – Lafait J., 649  
**PIXE** – Mahnke H.-E., 660  
**Plasma** – Malka V., 106 – Pukhov A., 159 – Silva L.O., 167  
**Plasma wakefield accelerator** – Muggli P., 116  
**Plasma-based accelerator** – Muggli P., 116  
**Polarization** – Santagiustina M., 980  
**Polymer solution** – Lindner A., 712  
**Polymer stretching** – Steinberg V., 728  
**Porous anodic alumina** – Pribat D., 320  
**Power line communication** – Rouissi F., 22  
**Primary thermometer** – Fellmuth B., 828  
**Printed circuit board** – Beghou L., 91  
**Probe** – Rioult J., 13  
**Propagation channel** – Rouissi F., 22  
**Proton beam** – Carroll D.C., 188  
**Proton radiography** – Fuchs J., 176  
**Proximity induced superconductivity** – Ferrier M., 252

## Q

**Quantum chaos** – Orjubin G., 42  
**Quantum dot** – Nielsen T.R., 957 – Martinez A., 1000

## R

**Radiation pressure** – Macchi A., 207

**Radiation pressure dominated acceleration** – Bulanov S.V., 216  
**Radioactivity** – Hubert Ph., 622  
**Rare-earth ion-doped crystal** – Baldit E., 927  
**Reciprocity theorem** – Adam J.-P., 65  
**Red blood cell** – Guido S., 751  
**Reflection coefficient** – Tahraoui T., 227  
**Relativistic laser plasmas** – Bulanov S.V., 216  
**Resonance** – McPhedran R.C., 391  
**Resonators** – Guenneau S., 352  
**Reverberation chamber** – Serra R., 31 – Orjubin G., 42 – Bonnet P., 54  
**Rheology** – de Viguierie L., 612 – Misbah C., 701 – Lindner A., 712 – Fischer P., 740 – Verdier C., 790  
**Robin conditions** – Adams S.D.M., 437  
**RPA** – Wełnic W., 514  
**Ruby glass** – Lafait J., 649

## S

**Scattering** – Lafait J., 649  
**Selective amplification** – Trebaol S., 964  
**Self-assembly** – Derycke V., 330  
**Semiconductor optical amplifiers (SOA)** – Berger P., 991 – Martinez A., 1000 – Thévenaz L., 1008  
**Silicon** – Degoli E., 575  
**Silicon nanowires** – Pribat D., 320  
**Simulation** – Adessi C., 305  
**Sintering** – Hidouri M., 242  
**Slow light** – Goldfarb F., 919 – Baldit E., 927 – Bortolozzo U., 938 – Talneau A., 949 – Nielsen T.R., 957 – Berger P., 991 – Martinez A., 1000 – Thévenaz L., 1008  
**Spectral line shapes** – Castrillo A., 894  
**Split ring resonators** – Lippens D., 400  
**Static and dynamical disorders** – Ishii H., 283  
**Statistical electromagnetics** – Serra R., 31  
**Stochastic collocation** – Bonnet P., 54  
**Stochastic field** – Bonnet P., 54  
**Stokes flow** – Barthès-Biesel D., 764 – Vlahovska P.M., 775  
**Stress sensor** – Steinberg V., 728

**Sub-wavelength imaging** – Adams S.D.M., 437  
**Subwavelength** – Ourir A., 414  
**Surface modes** – Guenneau S., 352  
**Surface plasmon** – Lafait J., 649  
**Surfaces** – Hogan C., 560  
**Suspension** – Fischer P., 740 – Barthès-Biesel D., 764  
**Synchrotron** – Cotte M., 590

## T

**TDDFT** – Castro A., 469 – Rehr J.J., 548  
**Temperature** – Pitre L., 835 – Benz S., 849  
**Templates** – Pribat D., 320  
**Tensorial analysis of electrical networks** – Leman S., 70  
**Terahertz technology** – Lippens D., 400  
**Theoretical interatomic potential** – Mehl J.B., 859

**Thermal conductivity** – Mehl J.B., 859  
**Thermodynamics** – Pitre L., 835  
**Time domain** – Adam J.-P., 65  
**Time-dependent transport** – Foa Torres L.E.F., 297  
**Time-reversal mirror** – Fink M., 447  
**Tissues** – Verdier C., 790  
**Topology analysis** – Leman S., 70  
**Transfer function** – Chakroun M., 236  
**Transient radiation** – Rioult J., 13  
**Transistors** – Adessi C., 305 – Derycke V., 330  
**Transit-time broadening** – Bordé C.J., 866  
**Turbulent drag reduction** – Steinberg V., 728

## U

**Ultrahigh-intensity lasers** – Lefebvre E., 197  
**Ultrashort pulse** – Veisz L., 140

## V

**Variable phase** – Ourir A., 414  
**Vibrometer laser** – Chakroun M., 236  
**Viscoelastic** – Verdier C., 790  
**Viscosity** – Mehl J.B., 859

## W

**Warm dense matter** – Fuchs J., 176  
**Wavelength conversion** – Thévenaz L., 1008  
**Whispering gallery mode resonators** – Trebaol S., 964  
**Wine dating** – Hubert Ph., 622

## X

**X-ray fluorescence (XRF)** – Mahnke H.-E., 660  
**X-rays** – Walter P., 676  
**XAS** – Rehr J.J., 548
