

COMPTES RENDUS PHYSIQUE

Tome 11 (2010) – N° 3–4

Cover illustration: Directional coarsening in Nickel based superalloys under stress: phase field simulations (see Chang et al., this issue).

Illustration de couverture : Coalescence orientée dans des superalliages base Nickel sous contraintes : simulation par champs de phase (voir Chang et al., ce numéro).

Computational metallurgy and scale transitions / *Métallurgie numérique et changements d'échelle*

Guest editor / Rédacteur en chef invité : Yves Bréchet

- Foreword: Numerical metallurgy and scale transitions
Yves Bréchet 207
- *Ab initio* approaches to designing alloy phase equilibria
Alain Pasturel, Noel Jakse 210
- Modeling of solidification: Grain structures and segregations in metallic alloys
Charles-André Gandin 216
- Atomic simulations of diffusional phase transformations
Emmanuel Clouet, Frédéric Soisson 226
- Mesoscopic modelling of precipitation: A tool for extracting physical parameters of phase transformations in metallic alloys
Alexis Deschamps, Michel Perez 236
- Phase field methods: Microstructures, mechanical properties and complexity
Alphonse Finel, Y. Le Bouar, A. Gaubert, U. Salman 245
- Mesoscale simulations of the kinetics of solid–solid phase transformations: Selecting the relevant interfacial compositions for shape-preserved growth
Christopher R. Hutchinson, Hatem S. Zurob 257

Suite du sommaire page suivante

Sommaire (suite)

- Modeling grain growth and related phenomena with vertex dynamics
Joël Lépinoux, Daniel Weygand, Marc Verdier 265
- Scale transitions in crystal plasticity by dislocation dynamics simulations
Benoît Devincré, Ladislav Kubin 274
- Multiscale modelling of indentation in FCC metals: From atomic to continuum
Hyung-Jun Chang, Marc Fivel, David Rodney, Marc Verdier 285
- Finite element simulations of coherent diffraction in elastoplastic polycrystalline aggregates
H. Proudhon, N. Vaxelaire, S. Labat, S. Forest, O. Thomas 293
- Microstructures and rheology of the Earth's upper mantle inferred from a multiscale approach
Olivier Castelnau, Patrick Cordier, R.A. Lebensohn, Sébastien Merkel, Paul Raterron 304
- Advances in cleavage fracture modelling in steels: Micromechanical, numerical and multiscale aspects
André Pineau, Benoît Tanguy 316
- Multiscale modeling of ductile failure in metallic alloys
Thomas Pardoen, Florence Scheyvaerts, Aude Simar, Cihan Tekoğlu, Patrick R. Onck 326
