

COMPTES RENDUS PHYSIQUE

Tome 14 (2013) – N° 1

35-T polyhelix magnet at the LNCMI-Grenoble high-magnetic-field facility. © D. Morel

DOSSIER

Physics in High Magnetic Fields / *Physique en champ magnétique intense*

Guest editors / Rédacteurs en chef invités : William Knafo, Clément Faugeras, Geert Rikken, Jean-Louis Tholence

• Foreword Clément Faugeras, William Knafo, Geert Rikken, Jean-Louis Tholence	1
• State of the art and developments of high field magnets at the “Laboratoire National des Champs Magnétiques Intenses” François Debray, Paul Frings	2
• Organic conductors in high magnetic fields: Model systems for quantum oscillation physics Alain Audouard, Jean-Yves Fortin	15
• Quantum vacuum magneto-optics Rémy Battesti, Paul Berceau, Mathilde Fouché, Geert L.J.A. Rikken, Carlo Rizzo	27
• From quantum oscillations to charge order in high- T_c copper oxides in high magnetic fields Baptiste Vignolle, David Vignolles, Marc-Henri Julien, Cyril Proust	39
• Heavy fermions in a high magnetic field Dai Aoki, William Knafo, Ilya Sheikin	53
• Graphene in high magnetic fields Milan Orlita, Walter Escoffier, Paulina Plochocka, Bertrand Raquet, Uli Zeitler	78
• Iron-based superconductors in high magnetic fields Amalia I. Coldea, Daniel Braithwaite, Antony Carrington	94

Continued on the next page

Contents (continued)

- Resonance THz spectroscopy in high magnetic fields
Anne-Laure Barra, Michel Goiran, Roberta Sessoli, Sergei A. Zvyagin 106
- Beyond 100 Tesla: Scientific experiments using single-turn coils
Oliver Portugall, Pierre Yves Solane, Paulina Plochocka, Duncan K. Maude, Robin J. Nicholas 115
- Optical spectroscopy on semiconductor quantum dots in high magnetic fields
Adam Babinski, Marek Potemski, Peter C.M. Christianen 121
