

COMPTEs RENDUS PHYSIQUE

Tome 17 (2016) – N° 6 – juin–juillet

Left: Space-based gamma-ray astronomy. The Fermi Gamma-ray Space Telescope (bottom) and the entire gamma-ray sky (1 GeV–100 GeV) in Galactic coordinates, as viewed by the instrument (top).

[Images: NASA/DOE/Fermi LAT Collaboration]

Right: Ground-based gamma-ray astronomy. The H.E.S.S. array (20 GeV–100 TeV) of Cherenkov telescopes in Namibia (bottom) and the supernova remnant RX J1713-3946 (1° angular diameter), as resolved by H.E.S.S.

[Images: G. Fontaine (bottom), Astron. Astrophys. & ESO/H.E.S.S. Collaboration (top).]

DOSSIER

Gamma-ray astronomy / *Astronomie des rayons gamma* – Volume 2

Coordinators / *Coordinateurs* : Bernard Degrange, Gérard Fontaine

- Foreword
Bernard Degrange, Gérard Fontaine 581
- Starburst galaxies as seen by gamma-ray telescopes
Stefan Ohm 585
- Active galactic nuclei at gamma-ray energies
Charles Dennison Dermer, Berrie Giebels 594
- Gamma-ray bursts at high and very high energies
Frédéric Piron 617
- Gamma rays as probes of the Universe
Dieter Horns, Agnieszka Jacholkowska 632
- High-energy gamma-ray sources of cosmological origin
Pierre Brun, Johann Cohen-Tanugi 649
- The future of gamma-ray astronomy
Jürgen Knödlseder 663
