

COMPTES RENDUS PHYSIQUE

Tome 20 (2019) – N° 5 – juillet–août

Cover illustration. Wavelet-based synchrosqueezing transforms on a synthetic signal. For further details, see: S. Meignen, T. Oberlin, and Duong-Hung Pham, Synchrosqueezing transforms: From low-to high-frequency modulations and perspectives, this issue, pp. 449–460.

Illustration de couverture. Transformée synchrosqueezée en ondelettes sur un signal de synthèse. Pour plus de détails, voir : S. Meignen, T. Oberlin et Duong-Hung Pham, La transformée synchrosqueezée, adaptation aux signaux fortement modulés et perspectives, ce numéro, pp. 449–460.

DOSSIER

Fourier and the science of today / *Fourier et la science d'aujourd'hui*

Coordinators / *Coordinateurs* : Patrick Flandrin, Cédric Bernardin

Physics / *Physique*

- Foreword
Cédric Bernardin, Patrick Flandrin 387
- Fourier's law based on microscopic dynamics
Abhishek Dhar, Herbert Spohn 393
- A microscopic view of the Fourier law
Thierry Bodineau, Isabelle Gallagher, Laure Saint-Raymond 402
- Glassy dynamics in strongly anharmonic chains of oscillators
Wojciech De Roeck, François Huveneers 419
- Role of conserved quantities in Fourier's law for diffusive mechanical systems
Stefano Olla 429
- Fourier's law and many-body quantum systems
Christian B. Mendl 442

Contents (continued)

Information sciences / Sciences de l'information

- Synchrosqueezing transforms: From low- to high-frequency modulations and perspectives
Sylvain Meignen, Thomas Oberlin, Duong-Hung Pham 449
- Fourier at the heart of computer music: From harmonic sounds to texture
Vincent Lostanlen, Joakim Andén, Mathieu Lagrange 461
- Fourier could be a data scientist: From graph Fourier transform to signal processing on graphs
Benjamin Ricaud, Pierre Borgnat, Nicolas Tremblay, Paulo Gonçalves, Pierre Vandergheynst 474
- Multivariate scale-free temporal dynamics: From spectral (Fourier) to fractal (wavelet) analysis
Patrice Abry, Herwig Wendt, Stéphane Jaffard, Gustavo Didier 489
